## PHYSICS

9702/35

Paper 3 Advanced Practical Skills 1

October/November 2023

2 hours

You must answer on the question paper.

You will need: The materials and apparatus listed in the confidential instructions

## INSTRUCTIONS

- Answer **all** questions.
- Use a black or dark blue pen. You may use an HB pencil for any diagrams or graphs.
- Write your name, centre number and candidate number in the boxes at the top of the page.
- Write your answer to each question in the space provided.
- Do **not** use an erasable pen or correction fluid.
- Do **not** write on any bar codes.
- You will be allowed to work with the apparatus for a maximum of 1 hour for each question.
- You should record all your observations in the spaces provided in the question paper as soon as these observations are made.
- You may use a calculator.
- You should show all your working and use appropriate units.

## INFORMATION

- The total mark for this paper is 40.
- The number of marks for each question or part question is shown in brackets [ ].

### For Examiner's Use

**You may not need to use all of the materials provided.**

**1** In this experiment, you will determine the resistivity of a metal.

- (a) • Set up the circuit shown in Fig. 1.1.

**Fig. 1.1**

- The voltmeter reading is  $E$ .

Record  $E$ .

$E = \dots\dots\dots$  V

- Set up the circuit shown in Fig. 1.2.

**Fig. 1.2** (not to scale)

- You have been provided with several resistors, each with a different value of resistance. Select resistors and connect them so that  $R_1 = 33\,\Omega$  and  $R_2 = 56\,\Omega$ .
- Record  $R_1$  and  $R_2$ .

$R_1 = \dots\dots\dots$

$R_2 = \dots\dots\dots$

- Calculate  $(R_1 + R_2)$ .

$(R_1 + R_2) = \dots\dots\dots$

- Close the switch.
- The ammeter reading is  $I$ .

Record  $I$ .

$I =$  ..... mA

- Open the switch.

[1]

- (b) Change the values of  $R_1$  and  $R_2$  to provide six different values of  $(R_1 + R_2)$ .

For each arrangement, record values of  $R_1$ ,  $R_2$  and  $I$  in a table. Include values of  $(R_1 + R_2)$  and  $\frac{1}{I}$  in your table.

[8]

- (c) (i) Plot a graph of  $\frac{1}{I}$  on the  $y$ -axis against  $(R_1 + R_2)$  on the  $x$ -axis.

[3]

- (ii) Draw the straight line of best fit.

[1]

- (iii) Determine the gradient and  $y$ -intercept of this line.

gradient = .....

$y$ -intercept = .....

[2]

- (d) It is suggested that the quantities  $I$ ,  $R_1$  and  $R_2$  are related by the equation

$$\frac{1}{I} = F(R_1 + R_2) + G$$

where  $F$  and  $G$  are constants.

Using your answers in (c)(iii), determine the values of  $F$  and  $G$ .

Give appropriate units.

$$F = \dots\dots\dots$$

$$G = \dots\dots\dots [2]$$

- (e) (i) Use the micrometer to measure the diameter  $d$  of the wire.

$$d = \dots\dots\dots [2]$$

- (ii) It is suggested that  $G$  is given by the equation

$$G = \frac{4\rho L}{\pi d^2 E}$$

where  $L$  is 0.560 m and  $\rho$  is the resistivity of the metal of the wire.

Using your answers in (a), (d) and (e)(i), determine a value for  $\rho$ .

$$\rho = \dots\dots\dots \Omega \text{ m} [1]$$

[Total: 20]

**BLANK PAGE**

**You may not need to use all of the materials provided.**

**2** In this experiment, you will investigate the movement of a mass hanger.

**(a)** You are provided with a number of paper clips.

Use the top-pan balance to determine the mass  $m$  of **one** paper clip.

$m = \dots\dots\dots$  g [1]

**(b) (i)** • Set up the apparatus as shown in Fig. 2.1.

**Fig. 2.1** (not to scale)

- Lower the slotted mass until it just touches the bench.
- The distance between the bottom of the mass hanger and the bench is  $h$ , as shown in Fig. 2.1.

Measure and record  $h$ .

$h = \dots\dots\dots$  cm [1]

- (ii) • Add just enough paper clips to the mass hanger so that it falls smoothly to the bench without stopping.
- Record the total number  $N$  of paper clips on the mass hanger.

$N = \dots\dots\dots$  [1]

- (iii) • Adjust the position of the slotted mass so that it is just touching the bench again.
- Release the slotted mass and measure the time  $t$  for the mass hanger and  $N$  paper clips to fall to the bench.

$t = \dots\dots\dots$  [2]

- (iv) Estimate the percentage uncertainty in your value of  $t$ . Show your working.

percentage uncertainty =  $\dots\dots\dots$  % [1]

- (v) The acceleration  $a$  of the mass hanger is given by the relationship

$$a = \frac{2h}{t^2}.$$

Calculate  $a$ .

$a = \dots\dots\dots \text{cms}^{-2}$  [1]

- (vi) Justify the number of significant figures that you have given for your value of  $a$ .

$\dots\dots\dots$

$\dots\dots\dots$

$\dots\dots\dots$  [1]

- (c) • Add two more paper clips to the mass hanger.
- Record the total number  $N$  of paper clips on the mass hanger.

$N =$  .....

- Repeat (b)(iii) and (b)(v).

$t =$  .....

$a =$  .....  $\text{cm s}^{-2}$   
[2]

- (d) It is suggested that the relationship between  $a$ ,  $m$  and  $N$  is

$$\frac{k}{a} = 1 + \frac{2Z}{Nm}$$

where  $Z$  is the mass of the slotted mass and has the value 10.0 g, and  $k$  is a constant.

Using your data, calculate two values of  $k$ .

first value of  $k =$  .....

second value of  $k =$  .....  
[1]

(e) It is suggested that the percentage uncertainty in the values of  $k$  is 25%.

Using this uncertainty, explain whether your results support the relationship in (d).

.....

.....

.....

..... [1]

- (f) (i) Describe **four** sources of uncertainty or limitations of the procedure for this experiment.

For any uncertainties in measurement that you describe, you should state the quantity being measured and a reason for the uncertainty.

1 .....

.....

2 .....

.....

3 .....

.....

4 .....

.....

[4]

- (ii) Describe **four** improvements that could be made to this experiment. You may suggest the use of other apparatus or different procedures.

1 .....

.....

2 .....

.....

3 .....

.....

4 .....

.....
